Shubham Advertise WebApp — ACCOUNTANT MODULE

Goal

Build an **Accountant** section tightly connected with **Sales finalization + Supervisor Live status**, so the accountant gets **all billing-required information in one place**, with a clean flow for:

- Viewing bills to be generated (notified only when hoarding is Live)
- Generating bills (single or selected hoardings)
- Handling PO pending cases
- Auto-scheduling recurring bills (monthly/quarterly/yearly)
- Tracking pending/upcoming and overdue bills

---

1) Global Rules (Must Follow)

1.1 Notification + Overdue Trigger Rule

✅ **Accountant is notified ONLY when Supervisor marks a hoarding as Live.**
✅ **Overdue (24 hours) starts ONLY after the hoarding is Live** and a bill is due.

Meaning:

- Before Live: accountant can **see upcoming bills** and **can generate advance bills manually**, but:
  - no notification is sent
  - no overdue is applied

1.2 Default Sorting / Grouping Rule

✅ **Every list/table in Accountant module is grouped and sorted by Client Name by default**, unless explicitly specified otherwise.

---

2) Payment Plans (Complete List)

Sales will choose one of these plan types:

1. **Advance Monthly (Cycle-wise)**
    - Example: March payment made on 1st March for March cycle
    - Accountant still gets “To Be Generated” notification **only when hoarding goes Live**.
2. **Advance Full Campaign**
    - Entire campaign amount paid in advance
    - Accountant still gets “To Be Generated” notification **only when hoarding goes Live**.
3. **On-the-spot payment when hoarding gets Live**
4. **Payment after end of every month**
5. **Entire bill after end of campaign**
6. **Bill generate every month but give payment in hand** (monthly billing; payment collection is “in hand”)

✅ **Important:** Regardless of plan type, notification/overdue logic begins only after Live.

---

3) Billing Frequency (Required New Field)

Sales must also choose **Billing Frequency**:

- **Monthly**
- **Quarterly**
- **Yearly**
- **One-time** (recommended for Advance Full Campaign / End-of-campaign cases)

This frequency decides how often bills repeat.

---

4) Dashboard (Accountant → First Screen)

Show summary cards (date-range filter recommended):

- Total billing done (Base)
- Total billing done (With GST)
- Total bills generated (count)
- To Be Generated (count + amount)
- Pending (count + amount)
    - split: **PO Pending** and **Upcoming Scheduled**
- Overdue (count + amount)

- Completed (count + amount)
- Optional (if easy): Firm-wise totals, Mode-of-payment breakdown, Plan-wise totals

---

5) Accountant Tabs / Tables

Tabs

1. **To Be Generated** (NOTIFIED state after Live)
2. **Pending**
    - **PO Pending**
    - **Upcoming Scheduled Bills** (future)
3. **Overdue**
4. **Completed**

✅ Each tab shows **Client Name rows** (collapsed by default). Clicking a client expands dropdown showing hoardings under that client for that tab.

---

6) Client Row Expand (Dropdown Behavior)

6.1 Client Row

Each client row shows:

- Client name
- Total amount (base / GST / with GST) for items visible in that tab
- Buttons:
    - **Expand / Collapse**
    - **Create Bill** (universal client-level)

6.2 Dropdown (Hoarding Rows)

When expanded, show **all hoardings under that client**, and for each hoarding show:

A) Billing Details (must display)

- **Final Agreed Price (Base)**
- **GST Applicable (Yes/No)**
    - If Yes: show **two prices**
        - Base price
        - Base + 18% GST (auto calculated)
- **Duration** (months)
- **Billing Frequency** (Monthly/Quarterly/Yearly/One-time)
- **Payment Plan Type** (from the list above)
- **Mode of Payment** (Cash / Bank Transfer etc.)
- **Printing Charges** (from Sales)
    - If GST is applicable: show printing base + printing GST + printing total
    - If not: show printing base only
- (Optional if already in system) Mounting charges similarly
- **Billing Period for this bill event**
    - Example: “10 Apr – 9 May”
- **Next due trigger date** (when it moves to To Be Generated)
- Status badge:
    - To be generated / Pending / PO pending / Overdue / Completed
- If hoarding is not Live yet and accountant is viewing it (Upcoming tab):
    - show warning label: **“Hoarding not live yet.”**

B) Hoarding Details (from DB)

Display alongside each hoarding:

- City
- Area/Zone
- Location/Landmark
- Facing Direction
- Size (Width × Height)
- Position
- Hoarding Type
- Illumination

6.3 Client-level Total on Expand

When dropdown opens, show totals for the visible hoardings:

- Total Base
- Total GST
- Total With GST

---

7) Create Bill Options (Critical)

7.1 Universal “Create Bill” Button (Client-level)

Each client row has a **Create Bill** button (separate from dropdown expand).
This opens the **Create Bill interface** for that client.

7.2 Selective “Create Bill (Selected)” (Advance Billing Use-case)

Inside client dropdown:

- Add **checkbox selection per hoarding**
- Add button: **Create Bill (Selected)**

✅ Use-case: If client has 10 hoardings, accountant can select 3 and generate bill for only those 3 (even before Live).

Rules:

- If created before Live → allowed, but show warning “Hoarding not live yet.”
- No overdue/notification logic applies until Live.

---

8) PO Pending Flow

On each hoarding (in To Be Generated and/or in bill creation selection list), provide:

- Button: **Mark PO Pending**

When clicked:

- Move that bill event to:
  Pending → PO Pending
- Show it separately inside Pending tab.

---

9) Billing Engine Logic (Dates, Cycles, Scheduling)

9.1 Billing Start Date

By default:

- Billing starts from **Supervisor Live Date**

Supervisor can override during “Mark Live”:

- Supervisor optional note: **“Start billing from DATE to DATE”**
- This sets the billing start anchor for cycle calculation.

✅ Store:

- actual_live_date
- optional billing_start_override_date / billing_period_override_note

9.2 Cycle Calculation (Anchored billing periods)

Billing periods are anchored on Billing Start Date.

Monthly example

If Billing Start Date = 10 April:

- Cycle 1: **10 Apr – 9 May**
- Cycle 2: **10 May – 9 Jun**
- Cycle 3: **10 Jun – 9 Jul**

Quarterly example

- Cycle 1: 10 Apr – 9 Jul
- Cycle 2: 10 Jul – 9 Oct

Yearly example

- Cycle 1: 10 Apr – 9 Apr next year

9.3 When a bill becomes “To Be Generated”

Rule:

- The **first bill event** becomes “To Be Generated” on the **Live Date** (because that’s the first eligible notification moment).
- Subsequent recurring bill events:
    - After Cycle-1 bill is generated, next cycle sits in **Pending → Upcoming Scheduled**
    - It moves into **To Be Generated** on the **end date of the current cycle** (so it’s ready before next cycle begins)

✅ This matches your requirement: next cycle comes into “To Be Generated” on the last day of the ongoing cycle.

9.4 Overdue Rule

Only when:

- hoarding is Live AND
- bill is in To Be Generated AND
- not generated within 24 hours
  → move to **Overdue**.

---

10) Clear Example (Monthly Billing)

Scenario

Sales finalizes:

- Plan: **Advance Monthly**
- Frequency: **Monthly**
- Duration: **3 months**
  Supervisor marks Live on **10 April**
  Billing Start = 10 April

Cycle 1

- Billing period: **10 Apr – 9 May**
- On 10 Apr (Live):
    - Client appears in **To Be Generated**
    - Accountant generates bill → goes to Completed (for cycle 1)

Cycle 2 Auto-scheduling

- Next cycle is created automatically:
    - **10 May – 9 Jun**
- It stays in **Pending → Upcoming Scheduled**
- On **9 May**, it moves to **To Be Generated**
- If accountant doesn't generate bill within 24 hours:
    - moves to **Overdue**

This repeats until campaign duration ends.

---

11) Create Bill Interface (Billing Screen)

When accountant clicks:

- Create Bill (client-level) OR Create Bill (Selected),

Open a proposal-like interface showing:

- selected hoardings
- all billing + hoarding details
- totals (Base, GST, With GST)
- printing charges as separate line item
- (optional) mounting as separate line item

Accountant fields (progressive safety net)

Fields should open step-by-step:

1. **Select Firm** (mandatory)
    - Firms represent how billing is done (examples):
        - Firm A → GST billing
        - Firm B → Non-GST billing
        - Firm C → Cash billing
    - Purpose: firm-wise revenue tracking + charts
2. **Bill Number** (mandatory)
3. **Remarks** (optional)
4. **Upload Bill PDF (small PDF)** (as required)
5. **Mark Bill as Generated** (final action)

After generation:

- If recurring → next event remains scheduled in Pending → Upcoming
- If one-time → move to Completed

---

12) Sales Finalization — Fields Required for Accountant Engine

These must be captured at Sales finalize time (mandatory unless stated optional):

12.1 Mandatory billing engine fields

1. **Payment Plan Type** (6 types above)
2. **Billing Frequency** (Monthly/Quarterly/Yearly/One-time)
3. **Campaign Duration** (months)
4. **GST Applicable?** (Yes/No)
5. **Final Agreed Base Price** (after bargaining/discount)
6. **Mode of Payment** (Cash/Bank transfer etc.)
7. **Printing Charges (Base)** (default 0)
8. (Optional if used) Mounting charges (Base, default 0)

12.2 Client Billing Identity (Optional + pulled from Client DB)

These fields are **optional** at finalization, and should be fetched from **Client Database** if available.
If not present and Sales enters them, store/update them in Client Database.

- Billing company name (optional)
- Billing mobile (optional)
- Billing email (optional)
- GSTIN (optional; especially relevant if GST = Yes)
- Billing address (optional)

✅ Logic:

- If client record already has these → auto-populate in finalize screen
- If missing → allow Sales to fill (optional) and save back to client DB

12.3 Optional controls

- PO required? (Yes/No)
- PO notes / expected PO date (optional)

---

13) Live/Not-Live Visibility Rule

- Before Live: upcoming bills can be viewed in Pending → Upcoming Scheduled with warning **“Hoarding not live yet.”**
- After Live: the bill event becomes **To Be Generated**, notification triggers, and overdue logic can apply.

Final Summary (One Flow)

1. **Sales finalizes deal** → enters required billing plan + frequency + duration + rate + GST + charges
2. Deal exists in system; accountant can view upcoming schedule anytime
3. **Supervisor marks hoarding Live** (and can override billing start)
4. First bill event moves to **To Be Generated** (notification triggers)
5. Accountant generates bill → moves to Completed
6. If recurring, next cycle auto-created → sits in Pending → Upcoming → moves to To Be Generated on cycle end date
7. If not billed within 24h after it becomes due while Live → Overdue
8. PO pending cases move to Pending → PO Pending
