Modules Covered

1. **Sales Performance (Revenue + Enquiry + Reports)**
2. **Accountant Updates (Billing UI fixes)**
3. **Payment Module (Bill-wise tracking + partial payments + reminders)**

Important UI Rule (Must Follow Everywhere in these reports):
✅ **First level shows ONLY "Client / Party Name" + totals.**
✅ Hoardings / bill cycles / bills must **NOT** show directly on the first level.
✅ Details appear **only inside dropdown/expand under the client name.**

---

1) SALES PERFORMANCE MODULE

1.1 Who can see what (Access Rules)

- **Sales Person:** can see **only their own** performance data.
- **Sales Head:** can see performance of **all sales persons** + drilldown per sales user.
- No sales person should be able to view another sales person's report.

1.2 Sales Performance Dashboard (Sales + Sales Head)

Show summary cards (filter by Day / Month / Custom date range):

1. **Total Sales (Recognized Revenue)** for selected period
    - Split into:
        - **New Business**
        - **Renewals**
2. **Total Enquiries Generated**
3. **Enquiries by Source** (counts + chart)
    - Walk In
    - Self Generated
    - Via Telephonic
    - Via WhatsApp
    - Reference
    - Others
4. **Monthly Business (Enquiry-wise funnel)**
    - Total enquiries

    - Won (Business)
    - In Process
    - Dead / Follow up later
    - Not Interested
5. **Remaining Revenue Scheduled (Future)**
    - total remaining amount expected to be credited in future cycles (client-wise drilldown)

✅ All “Revenue” in Sales Performance = monthly/cycle credited revenue (NOT full booking value).

1.3 Market Visit / Random Approach Tracking (Daily Input)

Sales often meets random prospects in market and enters enquiries at end of day.

Add tracking so we know:

- Date-wise how many enquiries were created by the sales person
- Source-wise split (especially Self Generated / Walk In)
- Optional: a “Market Visit” flag or “Visited Market Today” note (simple log)

This helps measure:

- “When, how many and how often” enquiries were created.

1.4 Reports (Day-wise + Month-wise)

A) Day-wise Report

Grouped by date:

- Total enquiries created (with source split)
- Total recognized revenue credited that day (if any cycles credited)
- Quick view of “new vs renewal” credited that day

B) Month-wise Report (Key Requirement)

Example output format:

- Total enquiries in month: 100

    - Won: 10
    - In process: 20
    - Dead/follow up later: 50
    - Not interested: 20
- Recognized revenue credited this month: ₹X
- Remaining scheduled revenue (future months): ₹Y

✅ “Won” count and “Revenue credited” are related but not identical (credit is cycle-based).

1.5 Performance Progress Report (Client-wise drilldown)

First Level (ONLY Client Name rows)

For each client row show:

- **Credited revenue in selected month**
- **Remaining scheduled revenue (future)**
- Optional: number of active hoardings under that client (count only)

Dropdown inside Client row (Only on expand)

Show hoarding-level detail (NOT visible initially):

- Hoarding identifier/name
- Live date (billing cycle anchor)
- Duration months
- Per-cycle credit amount
- Next cycle date and amount
- Total credited so far for this hoarding
- Remaining amount for this hoarding
- Schedule preview: which months will credit how much (cycle-based)

✅ If a client has multiple hoardings with different end dates, each hoarding’s remaining schedule is tracked separately, but client row totals show combined numbers.

---

2) REVENUE CREDIT ENGINE (Monthly/Cycle-Based Recognition)

2.1 Core Rule (Locked)

✅ Revenue cycles follow **Live Date** (or supervisor override start date), not calendar months.

Example: Live on 10 Apr

- Cycle 1: 10 Apr – 9 May
- Cycle 2: 10 May – 9 Jun
- Cycle 3: 10 Jun – 9 Jul …

2.2 When revenue is credited (Automatic)

✅ Credit is **automatic** at each new cycle start **if hoarding is still Live**.
✅ No manual confirmation required.

- When a cycle is credited (or blocked), send **notification to Sales + Sales Head**:
  - "Cycle credited: Client X, Hoarding Y, Amount ₹___, Period ___"
  - OR "Cycle not credited: Hoarding not live/unmounted."

2.3 Renewal / Extension handling (Already exists)

You already have: **10 days prior expiry notification** to Sales.

- If Sales marks **Extend**, system appends new cycles and continues crediting month-by-month.
- If not extended, cycles stop after last period ends.

✅ **If one hoarding finishes and is not extended:** it automatically disappears from "remaining/upcoming credit" under that client. Other hoardings continue until their own cycles end.

2.4 Printing & Mounting Charges Handling (Locked)

Rule

- Printing and mounting charges are included in the hoarding's total value.
- Charges should be **assignable per hoarding** (individual values).

- The system computes per hoarding:

Hoarding Total Value = (monthly rate × duration months) + printing + mounting
Per-cycle credit = Hoarding Total Value ÷ duration months

✅ This makes revenue recognition consistent and prevents missing charges.

2.5 Revenue recognition example (matches required logic)

Client has 2 hoardings:

- Hoarding A: 1 month @ ₹10,000, printing ₹0, mounting ₹0
  Total = ₹10,000 → per-cycle credit = ₹10,000
- Hoarding B: 2 months @ ₹10,000/month, printing ₹2,000, mounting ₹0
  Total = ₹22,000 → per-cycle credit = ₹11,000 each month

Live date = 3 May

- May credited: A(10k) + B(11k) = 21k
- June credited: B(11k) only if still live
  Client row shows in May:
- Credited this month: 21k
- Remaining: 11k
  Dropdown shows which hoarding contributes what and when.

---

3) ACCOUNTANT CHANGES / UPDATES (Billing UI fixes)

3.1 Size unit conversion

- Size currently in centimeters.
- Show size in **Square Feet** wherever billing is displayed.
  - (Conversion logic depends on stored width/height units; implement consistent conversion in UI and/or DB helper.)

3.2 Party details must appear in Final Billing screen

In final billing info, party details are missing; must show:

- Party/Billing name
- GST number (if available)
- Contact number (client contact person / client number)
- Email (if available)
- Address (optional)

3.3 Billing Name vs Client Name in dropdown

- Where billing is done, the list shows client name in dropdown.
- Update logic:
    - **First level list should show "Billing Name / Party Name"** (primary).
    - On dropdown expand, show party details (GST, contact, email, etc.)
    - If billing name = client name, no change needed; it will look same.

3.4 Bill number placement (reduce clutter)

- Bill number must be shown **outside** (at the first-level row near party name), not hidden inside dropdown.
- Dropdown should be used for details, not for essential identifiers.

3.5 Billing identity fields (from Client DB, optional)

These fields are **optional** and should be fetched from **Client database if exists**; if missing and user enters them, store/update in client DB:

- Billing company name (optional)
- Billing mobile (optional)
- Billing email (optional)
- GSTIN (optional, relevant if GST yes)
- Billing address (optional)

---

4) PAYMENT MODULE (Bill-wise Tracking + Partial Payments + Reminders)

4.1 Party-wise grouping (first level only)

First level (ONLY Party/Billing Name rows)

Show:

- Party/Billing name
- Total pending amount (sum of all unpaid bills)
- Dropdown arrow to expand bill numbers

✅ Do not show hoardings directly at first level.

4.2 On expanding Party row

Show list of all bills under that party:

- Bill number list (only bill numbers on this level)
- Color coding for each bill number:
    - **Red** if remaining amount > 0
    - **Green** if remaining amount = 0

Buttons per bill number:

1. **Payment Received**
2. **Custom Reminder** (same style as Sales enquiry reminders)
    - Quick: remind in 7 days
    - Manual: open calendar to set date

4.3 On expanding a Bill Number

Show bill details:

- Bill created date
- Total bill amount

- Remaining amount (in **red** if >0)
- **Days due** = Today date – Bill created date
- Last payment received date (if any)
- Payment history (optional but recommended):
    - date, amount, note (if stored)

4.4 Payment Received flow (Partial payments supported)

When accountant clicks **Payment Received**:

- Popup asks:
    - Amount received
    - Date (default today)
    - Optional note/remarks

System action:

- If received < total remaining:
    - subtract and update remaining amount
    - keep bill status “pending” (red)
- If received equals remaining:
    - remaining becomes 0
    - bill turns **green**
- Update “last payment received date”
- Log payment entry in history

✅ Remaining amount text should show **red** when >0.

4.5 Example (Payment tab)

Party has 3 hoardings for 3 months → 9 bills total.
Payment tab should show:

- Party name row → expand → 9 bill numbers
- Each bill number:
    - red if unpaid/partial
    - green if cleared
- Clicking bill number shows due days based on bill creation date.

---

5) SYSTEM / DATA REQUIREMENTS (High Level)

5.1 Revenue Event Model (for Sales Performance)

Maintain per hoarding “credit schedule events”:

- client_id, hoarding_id, sales_person_id
- cycle_start_date, cycle_end_date
- cycle_amount (computed from total hoarding value / duration)
- credit_status: scheduled / credited / blocked
- credited_on date (if credited)
- blocked_reason (if any)

These events are grouped under client name in UI.

5.2 Notifications (Automatic)

- On each cycle start:
  - if hoarding is live → credit and notify Sales + Sales Head
  - else → block and notify Sales + Sales Head
- Renewal notification (already exists): 10 days prior expiry
  - if extended → append cycles and continue

---

6) FINAL UX SUMMARY (What the user sees)

✅ Everywhere in Sales Performance & Payment & Billing lists:

- First level: **Client/Party name + totals only**
- Dropdown: hoardings/bills/cycle schedules/details

This ensures:

- clean UI even with 10+ clients and 20+ hoardings

- accurate month-wise credited revenue and remaining revenue
- no revenue calculation failure due to variable end dates
